A GREAT KITCHEN TO MATCH YOUR LIFESTYLE

The kitchen is the heart of the home, where we work, manage the family and socialise. A well designed, good looking, functional kitchen can enhance your lifestyle, make life easier and improve the value of your home.

Practical easy-care work spaces are essential for fuss-free food preparation, cooking and entertaining.

Whether you are designing a new kitchen or making alterations, PlaceMakers' Kitchen Solution allows you to have full control over the process. We have modular flat pack products and custom designer cabinets with features like soft close drawers and premium hardware to dress up cabinets, doors and bench tops to express your individual style and set your kitchen apart.

This guide will give you the information you need to create the ultimate kitchen. What's more our dedicated kitchen consultants are here to assist you at every step of the way.

4 EASY STEPS

TO ORDER YOUR KITCHEN

THE PLACEMAKERS KITCHEN SOLUTION

CHOOSING YOUR KITCHEN

Start by identifying the features you want in your new kitchen, and the space you have available. Do you need to make any alterations to improve the space, or its location in relation to the dining or living area? Where would you like the services to be? Then consider the style you'd like.

STEP 1 | Plan

Layout your kitchen area and draw it onto the Kitchen Planner provided with this catalogue. Include any doors, electrical and gas points and fixed features in the room.

STEP 2 | Free Consultation

Discuss your needs with one of our kitchen design team. With our free 20-20 Design™ software service you can see a virtual model of your dream kitchen.

STEP 3 | Quote

Choose the design, colours and features you want, including the cabinets and bench top, then approve your quote.

STEP 4 | Installation

You can install your own kitchen or we can assist you.

There is a range of standard colours and design features available from stock, plus many others available to order. Talk to our consultants about the options from our designer series of kitchens.

5 year guarantee and product warranties

PlaceMakers make every effort to ensure that only the best components go into our kitchens. What's more, we provide a 5 year guarantee on parts and cabinetry, and our full consumer guarantee on all other products purchased from PlaceMakers.

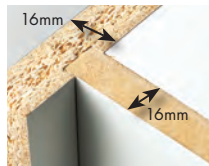

Strong, high quality cabinet construction; cam and dowel assembly.

Fully adjustable, clip-on drawer fronts.

Comprehensive hardware selection.

16mm sides and solid 16mm back boards are standard.

Metal sided drawers with solid 12mm bases.

Adjustable feet for easy levelling.

OUR TOTAL KITCHEN SOLUTION

Ever wondered why most party guests end up gathering in the kitchen? It's because it's the social hub of every home.

Let the PlaceMakers design team help you choose the best products and design features for your new kitchen. Don't forget, we offer a total design solution that can match a kitchen to any lifestyle.

Vertical lines of white thermal cabinetry, combined with black Quantum Quartz bench tops provide an elegant contrast and timeless 'country' look. Themed tiles and lighting set the scene, and they are all available from PlaceMakers. This kitchen would be perfectly at home in modern houses, traditional bungalows and villas.

OPTIONS TO ENHANCE YOUR KITCHEN

LAUNDRY OPTIONS

Kitchens and laundries are often situated adjacent to one another to make efficient use of plumbing connections. Create a seamless look by placing the laundry in cabinets that match the kitchen.

DRAWER OPTIONS

Wide storage drawers with optional inserts make your kitchen more functional.

KITSET

FLAT PACKS

The PlaceMakers' Flat Pack Kitchen demonstrates our ability to provide a durable and great value kitchen. With forty-two cabinets in the range, we give you more choice and style for your money.

Five modern colours are available and can be dressed up with a selection of bench tops and handles.

BENCH TOPS

The right bench top can cap off your new kitchen perfectly. PlaceMakers have a tremendous range of options for bench tops, depending on your budget, style and the look you want.

Our range includes high pressure laminates in flat blanks or custom made to the shape you want. Available in high quality Laminex, Wilsonart or Formica products. Most sinks may be undermounted for easy cleaning and a smooth, tidy appearance.

HIGH PRESSURE LAMINATE | Surfaces

PlaceMakers has a full range of bench materials and finishes to choose from in-store. A wide range of high pressure bench top laminates are available. Fresh textures, classy stone interpretations, contemporary solid colours, new square form and diamond gloss finishes all give you endless possibilities to create your own special look. The range has been designed to integrate with Melteca cabinetry, and to be a durable, fashionable surface of the highest quality.

EDGE PROFILES | Standard & Non-standard

Our consultants can help you decide on the edge profile that will suit the style of your new kitchen. Varying thickness, altering the edge overhang and waterfall style are all good ways to change its look.

SOLID | Surfaces

Bench top islands finished in various solid surfaces such as Granite, Stonex™, Corian™, CaesarStone™, Bisazza™ and many other fantastic looks. Generally, they're more expensive, however, there are options, so please ask if you're interested in a solid surface. And talk to us about the special installation requirements for these surfaces.

THE PERFECT FINISHING TOUCH FOR YOUR KITCHEN

FINISHING OPTIONS

Many people spend a significant amount of time and money thinking about and planning their kitchen. Often areas such as lighting, flooring and surface finishes are an afterthought. Because PlaceMakers provides a full range of building materials as well as kitchens, we are the ideal people to talk to about the complete kitchen environment.

FLOORING | Solid Wood and Laminate Overlay Floors

The great thing about solid wood and laminate floors is that they can be installed over the top of your existing concrete, tile, plywood or timber floor. They are easier to install than non-overlay timber or tiles and come completely finished.

Laminate flooring gives you the solid wood look, but for a fraction of the price and it's harder wearing. However, it can't be sanded and resealed, so you need to take good care of it.

On the other hand, solid wood flooring consists of solid timber with a fibreboard

backing, which means you can maintain it by sanding and resealing, just like real tongue and groove flooring.

Solid wood or laminate overlay flooring is not suitable for wet areas such as bathrooms and laundries.

Depending on the type of wood finish you choose, you can install a solid wood floor for around \$70M² to \$100M² and the equivalent laminate floor for \$20M² to \$50M². PlaceMakers has a full range of solid wood and laminate flooring.

TILING | Porcelain and Ceramic Floor Tiles

Ceramic and porcelain tiles give your home Mediterranean style. They're durable, hard wearing and require little maintenance.

Porcelain tiles are non-porous, which means you can use them anywhere, even outside if they are slip resistant. They are available in a range of fashion colours and styles, including the larger tiles which are becoming very

fashionable. Porcelain tiles are priced from \$30M².

Ceramic tiles are porous therefore we do not recommend that they be used outside. Ceramic tiles are priced from \$25M².

PlaceMakers has a range of popular tile styles, colours and designs to choose from or we can order in for you.

PAINTING | Painted Surfaces

Provided you prepare the surfaces and correctly apply it, paint can be an economical and easy-clean finish. It's also an easy way to revitalise the look of your kitchen. What's more, you can use different colours to create stunning contrasts between your kitchen and adjacent areas. For example, softer tones leading into the dining or lounge area and more vibrant tones where it meets the family room.

The new Kitchen, Bathroom and Laundry (KBL) paint from Taubmans is a great choice if you are renovating. Its new formulation is a great choice because it resists both moisture and heat.

A high level of moisture can lead to a build-up of mould, however the KBL paint has inbuilt protection against mould and mildew, saving you money in the long run.

LIGHTING

Kitchens need plenty of light. When planning your kitchen, it is vital that you take time to think about your lighting needs – both natural and artificial.

While traditional lighting provides great functionality, the modern forms of lighting (including halogen) can provide better light quality and create unique features within the kitchen.

Downlights are discreet and sometimes invisible and can be used for many different purposes. The lighting effects they produce are their most important feature and there is

virtually no limitation when using downlights in your kitchen.

Suspended and surface mounted lights are the usual choice, where aesthetics are important. By suspending the light or protruding it slightly from the ceiling, you can create focal points that enhance the overall look and feel of the kitchen.

Other options include lighting within translucent glass cupboards for subtle effects in the evening. PlaceMakers has a variety of exciting options which you can discuss with our kitchen consultants.

SPLASH-BACKS

The space directly behind the cooking area is subject to the highest level of spoilage and can also add a lot of visual impact to your kitchen. Many materials can be used to finish this surface and all offer particular benefits. The key is to identify the right material, so it pays to look at a range of options before making up your mind.

Stainless steel brings a commercial feel and can be cut to any size.

Glass and Seratone offer durability and cleaning benefits. Available in an array of modern colours.

Tiles look good and give the best fire protection. But consider using larger tiles, where fewer grouted surfaces mean less area for grime to accumulate.

Naturally, PlaceMakers are able to assist you with these options.

KITCHEN ACCESSORIES

The finer detailing of your kitchen is important for versatility and functionality but it's surprising how little you need to spend.

So here's a selection of the most popular kitchen accessories, but there are many more storage, detailing, display and convenience ideas to choose from. PlaceMakers kitchen consultants can provide you with information and brochures to help you make great choices.

TOE-KICK

For a clean, modern look. Come with clips to fit onto cabinet legs.

PULL-OUT PANTRY WITH CHROME SHELVES

Fully assembled with Chromeware fittings. Melteca finish and colour options. Made in Europe. 100kg load capacity.

3/4 CAROUSEL

For full use of cupboard space.

Available in a wide variety. Please ask in-store for more information.

APPLIANCE GARAGE

Hide away items to give you a clear and tidy bench top.

PULL-OUT TANDEM RUBBISH BINS

2 x 15L buckets on ball race tracks. One drawer action, with an extra drawer below for better utilisation of space.

WIRE CAROUSEL

Great option for utilising space for storing pots and pans.

TWO ARM TOWEL RAIL

Keeps tea towels tidy and out of the way.

CHROME SLIDE PULL-OUT

An easy way to store cleaning products.

SPICE RACK

One of many options to keep food preparation products organised.

TOP TIPS

- Ask your plumber to install isolator filter stops, when fitting any sink mixer.

The stainless steel filter protects the ceramic cartridge inside the tap from particles of dirt or grit that sometimes go through the water supply.

The isolator can be used to balance your water supply for a better mix of hot and cold water.

Isolators can also be used to turn off the water supply, if you need to work on the tap or replace it.

Using isolators makes taps easy to install, which reduces labour costs, and may also be required for the manufacturer's warranty.

- Consider installing a soap dispenser into your sink bench – this can be filled with dishwashing liquid or flowing soap. It's easy to install and can be refilled from the top.
- A sink mixer with pull-out spray is a versatile option for rinsing soap from your sink or washing vegetables.
- Consider using a sink mixer with a high spout – these provide extra height for filling the kettle or jug.
- If you have children, specify sink mixers with cartridges with a temperature limiter to reduce the risk of accidental scalding.
- If you want to mount a sink mixer on the wall, Aquatica have an exposed single lever mixer. They are super easy to operate, which is ideal for the elderly, and they provide for near hands-free operation, which can prevent the transfer of bacteria.
- Tapware should always be mounted into the stainless sink insert and not the bench top. This reduces the risk of the bench top being damaged should the sink tap leak.

3793986

- Frameless design • 1200W x2, 1800W x2 elements • Child lock safety • Residual heat indicators • Auto shutdown safety function • Total power 6000W 230V 50HZ

ARISTON 60CM ELECTRIC S/S COOKTOP PF604IX

3793918

- Ego electric • 4 element ego
- 6 heat setting • Front controls

INDUCTION COOKING HOW IT WORKS

- Electronics power up the coils which produce a high frequency electromagnetic field.
- This electromagnetic field penetrates the cooking element, which then forms a circulating electric current with the pot, generating heat.
- This heat is transferred to the contents of the pot and allows cooking to take place.
- As soon as the pot is removed from the stove top or if the element is turned off, the current is broken and the heat generation stops, which makes Induction Cooking an incredibly safe way of cooking at home.

COOKTOPS

PARMCO CERAMIC DOMINO HUB HO-4-2NF-CER

- 7 wash settings
 - 12 standard place settings
 - Discrete design
 - Quiet operation
 - Stainless steel interior
 - 4 wash temperatures
 - Electronic control with delay start
 - WELS compliant
 - Easy to use controls

DISHWASHER TIPS

- You'll get better results if you give your dishes and utensils a quick rinse before putting them in the dishwasher, especially if they are going to stay in the machine for a while.
- Utensils with long handles can stop the spray mechanisms from operating freely. Make sure they are loaded safely and securely.
- Delicate glasses like wine glasses can break easily. Make sure they are loaded so that they don't bump into each other.
- Get the best results with pots, pans and bowls by loading them so that the dirty side faces the water jets directly.

MICROWAVES

**ARISTON BUILT-IN
MICROWAVE MWAZ323IX**

3793908

- 5 cooking functions • 30L capacities • 60cm width • Trim kit included • Pasta function

INSINKERATOR ID55

3800065

- 0.55hp
- Advanced
- Standard quiet system
- 3 year warranty

WASTE DISPOSALS

A waste disposal in the kitchen cuts down meal preparation times, speeds clean-up and is better for the environment, with a reduction in bagged rubbish.

When selecting a waste disposal, choose one with stainless steel components which last longer.

Consider an added value option such as air switches inside the sink, which allow easier operation of the waste unit.

RANGEHOODS

& CANOPIES

RANGEHOODS & DUCTING

The right rangehood, correctly ducted can make cooking a much more pleasant experience – clearing fumes, odors and steam quickly and efficiently.

When choosing your rangehood consider the size of your kitchen and the style of food you like to cook. For instance, if you have a large kitchen or like highly flavoured food, you need a rangehood with a higher extraction rate. However, PlaceMakers can answer all your questions and show you a wide variety of rangehoods, including options from Tilta and Power-Pac. Choosing the right ducting is also important. Ducting is much more efficient than recirculation through a filter. We have all the components for effective ventilation, including the latest flat channel ducting. Talk to us in-store to find the best option for your project.

ARISTON 80CM DECORATIVE EXTRACTOR HOOD RHB8IX
3793936

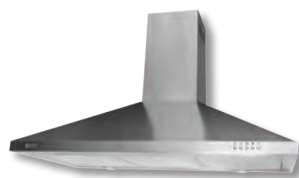

- 80cm box style stainless steel
- 2 x 20W halogen lights
- Real extraction capacity 754m³/h
- 3 speed settings • Washable filters

PLANNING

YOUR KITCHEN

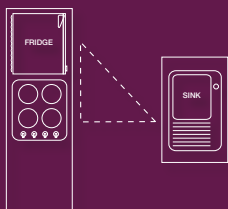

COMMON KITCHEN LAYOUTS

GALLERY

U-SHAPED

ISLAND

LINE

1. FIRST STEPS

Planning your kitchen can be very rewarding. It is also one of the best investments you can make in your house. To help you make the most of your kitchen, PlaceMakers have developed this design guide.

Think about your existing kitchen

It may be tempting to copy your existing kitchen layout for your new kitchen. But at this stage, it is well worth considering all the alternatives.

Start off by making notes on the things you like and dislike in your existing kitchen, and what benefits might result from rearranging and introducing different components. At this stage, you should also consider alterations (moving or removing walls, windows, and so on) you'd like to make.

It helps to have a clear idea of what you really want from your kitchen and the part it plays in your life. Is it simply a place to cook or grab a snack? A place to relax? Or a welcoming focal point for family gatherings? Do you have more than one person cooking at the same time? Draw up a list of your requirements and refer to these as you plan your kitchen.

The "Work Triangle"

The three most important areas of your kitchen are:

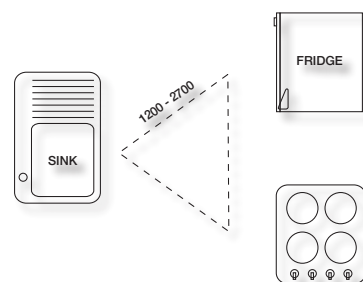

1. Food storage area (including refrigerator).
2. Cooking surface, e.g. hob.
3. Primary food preparation area (including sink).

Kitchen designers refer to this as the "Work Triangle".

Intelligent use of the work triangle will ensure your

work space is not too cramped while keeping walking to a minimum. When designing your kitchen, it is advisable to keep your work triangle to a manageable size. Each "leg" of the triangle should be no less than 1200mm and no more than 2700mm. The ideal total of the three "legs" should be between 4500mm and 6000mm.

Where possible, route traffic away from or around the work triangle.

2. MEASURING THE ROOM

Accurate measurements are vital to ensure that everything in your new kitchen fits. Following the simple steps outlined below will help prevent any errors.

Room Dimensions

1. Draw a rough sketch of your room in pencil on the grid planner provided.
2. Measure every wall, beginning in the corner to the left of a door. Measure at bench top height and write the measurements in millimetres.
3. Measure from the left corner to the edge of window/door/other opening.

(Note: measurements must be made to the outside of frame/trim.) Indicate the way doors/windows are hinged. Ensure that the distance from floor to underside of window sill is greater than the finished cabinet and bench top height. (Usually 900mm, i.e. 870mm cabinet + 30mm bench top.)

4. Measure across each opening from trim edge to trim edge.
5. Measure from trim edge to far wall.
6. Measure from left corner to far wall. Compare this dimension with the total of steps 3, 4 and 5. The totals should match!

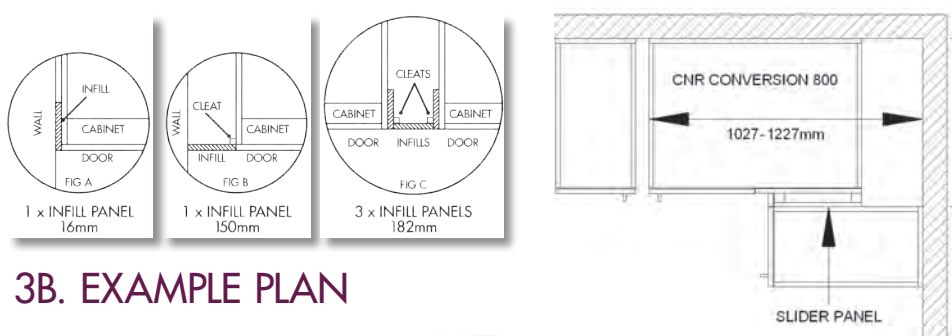

7. Repeat steps 1 to 6 for each wall of the room. It is recommended that all measurements above be repeated at floor level to identify any discrepancies deserving attention.
8. Mark exact location of sink, pipes, drains, electrical outlets and switches, including height from floor.

3A. MAKING IT FIT

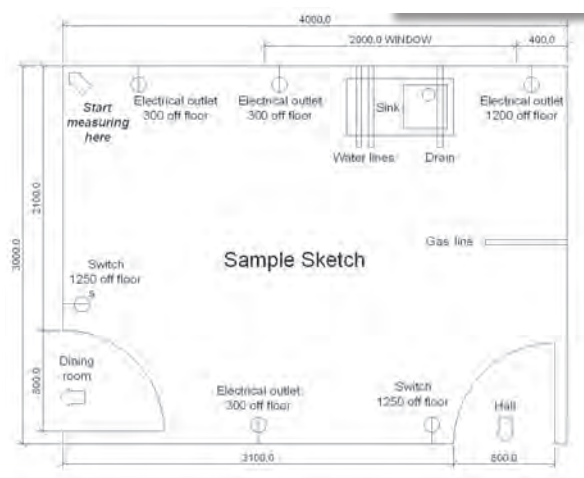

You are now ready to draw in the units of your new kitchen on your plan. Use adjustable corner units to take up space and fill in the "gaps".

To ensure that all the space is used to best advantage, and that there are no "gaps":

- Firstly experiment with different combinations of cabinets, including wine racks.
- Use Corner Conversion Units which can be adjusted to take up from 0–200mm (1027–1227mm from wall).
- Infill panels can also be used (see examples below).

3B. EXAMPLE PLAN

4. 20-20 DESIGN™

When you are thinking about a new kitchen there's a lot to consider – storage, bench space, surfaces, tapware, handles, colours, your budget and more. Luckily, PlaceMakers' kitchen design consultants do all the hard work for you. We use the latest interior design software 20-20 Design™ to help you create your dream kitchen. With this powerful software at our fingertips, you can see a virtual 3D model of your kitchen before you start building it and what's more it is a free service.

Your options for cabinets range from flatpack kitsets that you can assemble easily yourself, to fully customised kitchens with every convenience you have ever dreamed of. We also have all the paint, tiles, fixtures and fittings you need for a perfect finish.

THIS IS A FREE SERVICE

PLACEMAKERS KNOW HOW TIPS

- Where possible, use a base with 800mm under the sink.
- Allow 10–15mm additional space to the width of free-standing appliances.
- Be sure to allow space for small appliances such as toasters and jugs.
- Leave at least 300mm bench space between a hob and upright surfaces.
- Use an infill panel between cabinet and wall to allow for out of square.
- Don't forget to include at least one drawer unit.
- Include as much working surface as possible.
- Ensure there are plenty of power points near food preparation areas.
- Group tall units together to avoid splitting up working surfaces.
- Remember corners are ideal for storage space.
- A walk-in pantry maximises storage in a small kitchen.
- Don't locate hobs and stoves in front of windows.
- Don't locate wall units above the sink unless you are using a deeper (750mm+) bench top.

STEP BY STEP

HOW TO INSTALL YOUR KITCHEN

Installing your own kitchen can provide you with an immense level of personal satisfaction. However, it is important to replace existing wall linings, particularly if it is an older house.

This is an opportunity to reframe and insulate, and to provide surfaces that are level to ensure you get the best finish for your new kitchen. Also, while you have no kitchen cabinets in place, it's a great time to renovate the floor, alter walls, or replace or create new window openings to improve the lighting in your kitchen.

Your pantry, appliances and food preparation surfaces are the most important in the kitchen. They determine how well your kitchen works and meets your needs. It is best to have these appliances available when tradesmen are installing services, so they can read the instructions and ensure special requirements are taken into account.

1 Remove the old kitchen – Make sure that you use someone to help with heavy cabinets, and turn off the power and water before you start. Remove old wall and ceiling linings.

2 Secure services – Use a registered plumber or electrician to remove tapware, lights and power points. This is also the time to plumb or wire in new services, including rangehood ducting.

3 Measure the site accurately – Do a final and accurate measure, check floor levels, walls and corners are square.

4 Complete alterations – Undertake any alterations and prepare the floor. Check with your builder or local authority well beforehand to see if you need any permits.

5 Put in new wall linings – Place new insulation, wall linings, scotia mouldings and skirting. Do a double check to make sure you have all your services in place before you start. For the best finish it is often best to use a professional Plasterboard Stopper.

6 Assemble cabinets – Assemble your kitchen cabinets following the instructions provided with each cabinet.

7 Level Cabinets – Locate each cabinet and check the height and level. Some adjustment to the adjustable feet on each cabinet may be required.

8 Line up kitchen components – Place all cabinets in their correct location. Ensure they are the same height and level. Once this is done, screw cabinets to the wall and together as required

9 Measure and position rangehood – If you are installing a rangehood, measure the space and position of the rangehood for fixing. A good tip here is to make sure you have a suitable framing place to secure the rangehood in step 4.

10 Positioning the bench top – The most important thing is to take your time and follow the instructions. Ensure that the bench top is level and fits squarely against the walls and into the corners. Use a high quality sealer to finish off wall joins.

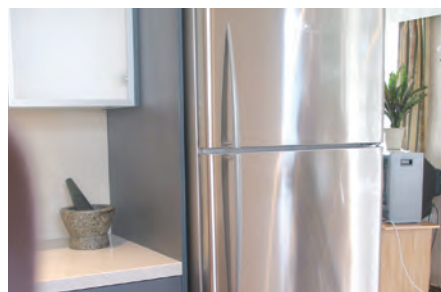

11 Installing toe-kicks – Toe-kicks can be installed using feet clips. Take time to measure lengths twice or more before you make any cuts. If using an aluminium toe-kick you may need to use a special metal cutting blade.

12 Sinks and tapware – To ensure the best fit, the sink, tapware and wastes should be installed by your plumber once you have the cabinets and bench tops in place.

13 Appliances – Choose your kitchen appliance and ensure that all its installation requirements are met to ensure effective operation.

14 Fridge and cabinets – Ensure you select a fridge that meets your current and future needs. Also, allow sufficient space and ventilation for the appliance to operate to the manufacturer's specifications.

15 Pantry and bench tops – The age-old axiom that "you can never have enough storage" is true. Make sure you plan sufficient storage to meet your needs and also convenient to the food preparation areas.

Any project needs to be carefully planned. There are a number of key decisions you need to make to ensure your kitchen project is a success. Time spent in planning your kitchen at the beginning will save you time and money in the long run.

If you are taking out an old kitchen, it's best to replace the wall linings at the same time. This can be done at a minimal cost and will ensure you have an even surface to work with. And whether it's a renovation or a new home, it is best to plan for all services, whether you install them now or later.

The things you need to consider are:

The services you need to plan for:

- Extra power points for appliances
- High level power points for new rangehoods
- Wiring for additional lighting
- Where will the sinks be and do I need more plumbing services?
- What rangehood extraction ducting do I need to provide?

Do you want to make alterations?

- Install, move or replace any doors, windows or walls to improve the flow of the kitchen or interaction with the rest of the living area
- Install any insulation or interior pre-lining products

How do you want to finish your new kitchen?

- Should I replace my kitchen floor and what options do I have?
- What finishings will I use for the walls and ceilings?
- Choose sinks, tapware and appliances
- Determine the lighting type and location
- Other accessories?

Our kitchen consultants are able to help you evaluate your needs and guide you on the best way to proceed. And since we're also a leading building product supplier, we have experts on site who can advise you on the best building materials to use.

Finally, it is important that you take time to review any local authority or building requirements. It is better that you take time to check what permits are required and what building and sanitary standards you need to meet, before starting your project. All plumbing, electrical and building work must be done, or signed off, by a registered professional tradesman. There may also be other specific requirements from your local authority or the Building Code. As many of these requirements have changed in the last year, it is best to check with your local authority first and identify your local service providers, before you begin.
